

3D Graphs in R

In the version of R used for the video, the default settings automatically created a 3D graph with the regression plane through the data. In the latest version of R, you need to set these parameters.

1. After going to 3D Scatterplot, click on the Options tab at the top of the screen.
2. Check the boxes shown below, specifically “Linear least-squares”
3. Click OK, then run the graph as shown in the video
